

Climate neutral overnight stay

In this hotel you can choose a climate neutral option for your stay. Your hotel works together with ClimatePartner, a pioneer in corporate climate protection.

Calculate, reduce and offset carbon emissions

Climate neutral overnight stay means we calculate all carbon emissions related to your stay – from electricity and laundry to catering.

We offset all unavoidable emissions through a certified carbon offset project supporting hydropower in Renun, Indonesia. Along with avoiding and reducing carbon emissions, offsetting is another important step in comprehensive climate protection.

It is important to reduce these emissions continuously, for example by efficient heating or regional suppliers.

You will receive a certificate for the carbon offset with an ID and tracking-url. Thus, you can track where and how your emissions are offset.

Carbon offset project: Hydropower in Indonesia

By choosing climate neutral, you support a hydropower carbon offset project in Renun in North Sumatra. The run-of-river power plant uses a natural height difference of 500 meters and contributes to several of the UN Sustainable Development Goals (SDGs).

Your contribution

- You contribute to fight global warming and support a recognised carbon offset project.
- You promote the development of a disadvantaged region.
- Your commitment is credible: the project is regularly reviewed by independent organisations. The carbon offset is monitored by TÜV Austria.
- You promote the expansion of renewable energies in Indonesia.
